                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            883, p

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Disclosure; SEQ ID NO 83; 164pp; French

οĘ The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-1R) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or epidermal growth factor receptor (IGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of

```
ö
             transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; heavy chain variable region.
                                                                                                                                                                                                                                                                 9

The invention relates to a novel isolated anti-insulin-like growth ractor capable of binding to human IGF-IR and, if necessary, capable of spable of spable of binding to human IGF-IR and, if necessary, capable of spable of spable of binding to human IGF-IR and, if necessary, capable of spable of spable of spable of spable of the invention is useful in comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary cardet ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or connected with a broomal activation of the IGF-IR and/or EGFR, and/or connected with a horizon of the medicament does not induce or only slightly interaction of IGFI or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly creeppor. The antibody is useful for preparation of a medicament intended to inhibit the growth caparation of a medicament intended to inhibit the growth and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent calls. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of psoriadis. (I) is useful in the preparation of a medicament intended for prevention or colon cancer. (I) is useful in preparation of a medicament intended for the prevention or for the preparation of a medicament intended for the prevention or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or colon cancer. (I) is useful in
a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cytostatic; antipsoriatic; antibody; insulin-like growth factor-1 receptor; IGF-IR; tyrosine kinase activity; or epidermal growth factor receptor; BGFR; signal transduction pathway; or epidermal growth factor receptor; complementarity determining region; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or reat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate. Jung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein sequence used to generate the Ab of the invention

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting to human IGF-IR and, if necessary, capable of specifically inhibiting to have a civily of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in a determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in a illness connected with an overexpression and/or a butormal activation of the IGF-IR and/or EGFR, and/or connected with a ctivation of the IGF-IR and/or EGFR, and/or connected with an abnormal activation of the IGF-IR and/or EGFR, and/or connected with and activation of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin creceptor. The antibody is useful for preparation of a medicament intended contacter, preferably IGF-dependent and/or IREZ/neu-dependent calls. (I) is useful in the capacity of the proparation of a medicament intended for prevention or tor the treatment of cancer, on undor the proliferation of the medicament of cancer. (I) is useful in the preparation of a medicament of percention of a medicament of percention or coll con cancer. (I) is useful in the preparation of a medicament of percention or coll con cancer. (I) is useful in the preparation of a medicament of percention of undometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a biologically active compound to call supplied for in vitro diagnosis of illnesses induced by an expensing or an underexpression or an underexpression of the IGF-IR and/or EGFR receptor. If is useful in the exemplification of the invention of the inventio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Beck A;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells, nour cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, Gapable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADSCF006 and ADZCF014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a activation of the transduction pathway of the signal mediated by the interaction of IGFP IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly
                                                                                                                                                                                                                                                                                                          Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lump tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder;

induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF1 and/or IGF2.

Gependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is useful for preparation of a medicament intended to inhibit the growth and/or the proliferation of tumor cells, preferably IGF-dependent.

CHER2/neu-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the prevention of a medicament intended for the prevention of cancer compound to cells expressing or overexpressing the IGF-IR and/or EGPR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                            overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QVQLQESGPGLVKPSETLSLTCTVSGYSITGGYLWNWIRQPPGKGLEWIGYISYDGTNNY 60

fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or spidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, no are useful against cancers of the profiterate. Iung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abuncarial expression of IGF-IR and/or EGFR. This sequence represents a beautiful and the superior of the profit of the profits of IGF-IR and/or EGFR. This sequence represents a beautiful and the sequence represents a beautiful and the sequence represents a profit of the profits 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostette tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriasis; dermatological disease; immune disorder; heavy chain variable region.

RESULT 9 ADJ76909 Anti-IGF-1R related protein #22.

(first entry)

06-MAY-2004

ADJ76909;

```
I receptor (IGP-IR) antibody (I) or its functional fragment, being capable of binding to human IGP-IR and, if necessary, capable of apable of binding to human IGP-IR and, if necessary, capable of pecifically inhibiting tyroshae kinase activity of the receptor, capable of pecifically inhibiting tyroshae kinase activity of the receptor, comprising a light or heavy chain having at least one complementary cardetermining region (CDR) consisting of one of two fully defined is amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an intended of the IGP-IR and/or connected with a crivation of the IGP-IR and/or EGPR, and/or connected with a cativation of the IGP-IR and/or EGPR, and/or connected with intended connected with inhibition of the insulin receptor. The antibody is useful for preparation of the medicament intended connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended connected with inhibition of the insulin caparation of a medicament intended to inhibit the growth and/or the proliferation of twent canels. Where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention of the preparation of a medicament of portable (I) is useful in preparation of a medicament of prevention or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention of a medicament of portable in which the abnormal presence, of IGP-calcal for in vitro diagnosis of illnesses induced by an experience of Insancer of In
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 135;

```
The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or reat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of tumor cells, so are useful against cancers of the profileration of tumor cells, so are useful against cancers of the profileration of tumor cells, and only, also osteosarcoma, and also for treating psoriaais. Ab are a lso used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

The invention relates to a novel isolated anti-insuli. Like growth ractor capable of binding to human IGP-IR and, if necessary, capable of capable of binding to human IGP-IR and, if necessary, capable of specifically inhibiting tyroshine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGP-IR and/or EGFR, and/or connected with a cativation of the IGP-IR and/or of EGFR, where interaction of the IGP-IR and/or of EGFR, where interaction of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin contained in the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF1 and/or IGF2.

CC receptor. The antibody is useful for preparation of a medicament intended to inhibit the growth contained in the proparation of a medicament intended to inhibit the growth cuseful for preparation of a medicament intended to inhibit the growth and/or IGF2-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent of a medicament intended for prevention or for the treatment of cancer, where the ERZ/neu-dependent cells. If is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer. (I) is useful in the
                                                                                                                                                        Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; reoplasm; prosteate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gymecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                    Human antibody 7C10 1 heavy chain variable region SEQ ID NO:75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Duflos A, Haeuw J,

preparation of a medicament intended for the prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of

       transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast; endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

Traceptor (IGF-IR) antibody (I) or its functional fragment, being capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tryosine kinase activity of the erceptor, comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary cardes (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a crivation of the IGF-IR and/or EGFR, and/or connected with a chinistration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral caparation of a medicament intended to inhibit the growth and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent cells, preferably IGF-dependent of more cells, preferably IGF-dependent cells, in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, capacital cancer, capacital or and cancer, in intended for prevention or for the preparation of a medicament intended for the prevention or for the creatment of psoriadis. (I) is useful in preparation of a medicament intended for the prevention or core colls expressation or a medicament intended for the prevention or core colls expressing or overexpressing the IGF-IR and/or EGFR receptor. It suseful for in virco diagnosis of illnesses induced by an or cel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19 QVQLQESGFGLVKPSETLSLTCTVSGYSITGGYLWNWIRQPPGKGLEWMGYISYDGTNNY 78

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis, Ab are a slo used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and; if necessary, capable of specifically inhibiting to have a capable of specifically inhibiting the way chain having a light or heavy chain having a least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67014). An antibody of the invention is useful in a cids (ADZ67016 and ADZ67014). An antibody of the invention is useful in a lineas connected with an overexpression and/or a banormal activation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or a banormal activation of the IGF-IR and/or EGFR, and/or connected with an abnormal activation of the IGF2014 In Intended of EGF with EGFR, where interaction of IGF2014 In Intended or EGF with EGFR, where interaction of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulant receptor. The antibody is useful for preparation of a medicament intended contacter, preferably IGF-dependent, especially IGF1 and/or IGF2-dependent and/or EGF-dependent cells (I) is useful in the preparation of a medicament intended for prevention or too the preparation of a medicament intended for prevention or ancer. (I) is useful in the preparation of a medicament intended for the prevention or ancer, endometrial cancer or colon cancer. (I) is useful in the experience of a underexpression or an underexpression or an underexpression or an underexpression or an endometrial sample with involves contacting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; immunoglobulin; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Haeuw J,

```

Sequence 117 AA;

```
The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (1i) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or pidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit growth and/or proliferation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating pseciasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
